**Title:** Comment: IEC mark(s) of conformity: CAB decision

Japan National Committee understands that the recommendation to Council Board should include the result of a thorough risk and cost analysis pointed out in the legal opinion no.2. With this in mind Japan National Committee would like to treat this matter as a reporting to Council Board instead of the recommendation.

The report should include all issues to be solved as well as the need of the risk and cost analysis. Japan National Committee also would like to comment to the "Blueprint" of IEC Mark of Conformity as follows.

In the item4, the national differences and essential differences are treated equally. We fully support the idea avoiding IEC Mark of Conformity to cover national differences. However, considering that the essential differences are normative, it should not be a simple prohibition. Japan National Committee would like to propose to create a separate item on the essential differences. The separate item should mention that a special care should be taken when IEC Mark of Conformity is to cover the essential differences.

**Title:** Comment: IEC mark(s) of conformity: CAB decision

1.The French National Committee is reluctant to recommend to the CB to proceed on this subject and fully supports the conclusion of legal advice annex 2. It seems of the highest importance to have a legal advise on the responsibilities of IEC on products with IEC logo.

2.The French National Committee would appreciate to have a precise definition on what is a "IEC recognised normative document" as said in annex 3 para 2.
